

Sena Afsar

Senior Product Designer, AI & UX — *founding designer for AI products*

senaafsar0@gmail.com · senaafsar.com · linkedin.com/in/senaafsar · Ankara, GMT+3 — remote

SUMMARY

I was the **first designer at Quin AI** and spent four years turning a predictive-AI engine into a product people actually used — discovery with founders and customers, V1 scoped with the CTO, the design system, the brand, and the interface itself. Dashboard adoption went from **zero to roughly half the customer base**; the product took Bronze for Best AI Product at the 2026 International Business Awards. Industrial design degree, and enough code to prototype the thing instead of describing it.

WHAT I OWN

Product — Discovery · V1 scoping and tradeoffs · Roadmap and versioned rollout · BRDs and specs · Feature prioritisation · Working directly with founders and engineering

AI product design — Human-in-the-loop flows · Trust, latency, empty and error states · Translating model capability into buildable scope

Design — End-to-end UX/UI · Design systems and token architecture · Dashboards, mobile, marketplaces · Localisation (EN/TR) · Identity systems, marketing sites, pitch and sales decks

Build — Figma · Rive · Framer · Webflow · Adobe CS · HTML/CSS · AI tooling (Claude, Lovable, Stitch)

EXPERIENCE

Quin AI — Senior Product Designer, AI & UX AUG 2024 — PRESENT

- Own product design across Quin's AI suite as the company's **only designer** — direction, system, and the shipped interface.
- Shaped and scoped **three major features and four partner integrations** with the CTO, deciding what V1 would *not* include as often as what it would.
- Wrote BRDs and versioned release plans so engineering received a spec rather than a mockup; built and maintain the design system — **design iteration time down 40%**.
- Designed the AI-specific work most teams skip: confidence and uncertainty states, empty and error cases, and the human override moments where a user has to disagree with the model.
- Product awarded **Bronze, Best AI Product — International Business Awards (Stevie®), 2026**.

Quin AI — UX/UI Designer MAR 2022 — AUG 2024

- Inherited an agency-built, CRM-style dashboard that was technically unbuildable and had **zero users** — no customers, not even internal teams. Rebuilt it end to end.
- Ran discovery with the founders, founding engineer and customer success, plus customer interviews with **Koçtaş, Dagi and Under Armour**; cut V1 to the predictive-audience core so the product could ship and prove value.
- Result: from 0 active users to daily use by customer success, live product demos replacing static sales decks, and ~50% of customers using the dashboard independently.**
- Established Quin's first design system and design-to-dev workflow, then extended the work outward: brand style guide, marketing website, and the pitch and sales decks used to sell the product.

Founder Institute Turkey — Program Communications Lead (part-time) APR 2021 — JAN 2023

- Two years inside a startup accelerator, watching several hundred founders pitch — where I learned to structure an argument before opening a design file. Grew cohort applications through targeted campaigns and channel marketing; coordinated a team of 10.

SELECTED WORK
senaafsar.com

Quin AI — AI/SaaS dashboard. A rescue and rebuild: 0 → ~50% customer adoption, Stevie-winning.

Hirehoot — 0→1 AI recruitment platform. A wizard that drafts the job description *with* the hiring manager, not for them; bilingual onboarding; a token-based system specified across every state.

TeslimX — Mobile logistics app. Offline-first, one-thumb, ≤3 taps per delivery flow; brief to dev-ready handoff in one month.

FIND4 — A code-breaking game, designed and coded solo, live in the browser.

EDUCATION

BA Industrial Design — Middle East Technical University (METU) 2022

AI Product Management — Product HQ 2023

Turkish (native) · English (fluent)
